

Sectional Connector (optional)

Installing the sectional connector prevents sectional pieces from sliding apart. Please note that once installed, the connectors may be slightly visible if the sectional pieces are configured as stand-alone pieces.

INSTRUCTIONS FOR INSTALLATION

KEEP ALL PACKAGING MATERIALS UNTIL YOU HAVE VERIFIED ALL COMPONENTS AND PARTS

- 1 Determine the sectional configuration best suited for your space - chaise on the right or left side. Gently rest the backs of the sectional components onto a clean, flat surface.
- 2 On the bottom of the chaise, centre and position the Post approximately 3/4" from the edge to be connected to the sofa. Ensure Post is facing outward.
- 3 Using the screws provided, and a drill or screwdriver, secure Post to chaise frame.
- 4 On the bottom of the sofa, position the Clip so that the distance between the clip and the side edge of the sofa is equal to the distance between the post and the side edge of the chaise. This will ensure the sectional pieces will align when connected.
- 5 Using the screws provided, and a drill or screwdriver, secure Clip to sofa frame, rotating Clip arms as needed.
- 6 Turn pieces upright, being careful to not put excessive pressure on any individual leg. Align Post with Clip on each piece and push together until they lock in place.
