

# Solar LED Umbrella

PATIO AND GARDEN ESSENTIALS

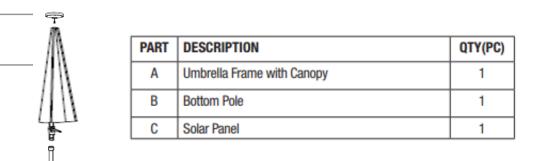

#### How Solar Lights Work:

During the day, the solar panel collects sunlight and converts it into electrical power stored in the rechargeable battery included. At night, the photosensor built to the solar panel, sensing the absence of light. Turns on the solar light automatically using the electricity stored by the day. The more sunlight the fixture gets, the stronger the charge will be and the longer your fixture will illuminate at night.

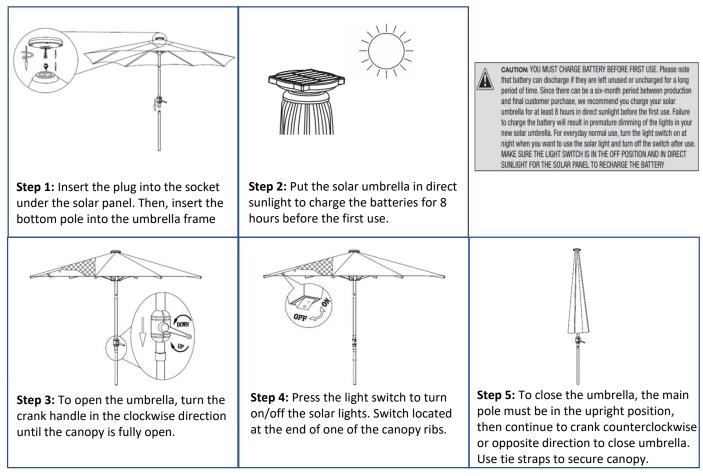

### **Preinstallation:**

- Ensure the mounting location for your solar light allows the solar panel to receive a full day of direct sunlight
- Do not install in shady areas as this will significantly reduced performance at night.
- The lamp should receive a minimum of 8 hours of direct sunlight per day for optimal performance at night.
- Be sure the location is not near the ambient light from other light sources during evening hours. These light sources may affect the photosensor and cause the lamp to turn off.

## **Assembly and Installation**

#### Maintenance

- Periodically clean the solar panel with a wet cloth. Do not apply any solvents or chemicals.
- Remove batteries if umbrella's solar function light is not used for long periods of time.
